PROJECTS

Ascent Sobriety App —

This sobriety app was a collaboration between myself and five other developers. It uses passport.js to authenticate users and mySQL to store the user's data.

[Link](#)

Adult PetFinder —

This was a group project to create a site that uses 3 different API calls to generate pictures. We used Materialize, JQuery, and moment.js to complete this project.

[Link](#)

Day Planner —

The day planner app uses local storage to retain information in a 9-5 todo list. Technologies used were moment.js, and JQuery.

[Link](#)

Employee Tracker —

This app uses MySQL and inquirer to control departments, roles and employees so that an employer can easily manage their business in the terminal.

[Link](#)

ReadMe Generator —

The ReadMe Generator uses node.js and inquirer to prompt the user for information about their project like description, installation, etc to create a quality readme.

[Link](#)

Burger App —

This application uses express handlebars to create burgers that will be added to a database. The user can then choose to devour and delete the burger afterwards.
